

Owning your Platform AI Journey

Alexandra McDowell, Principal AI Architect,
FlightPath Team, Office of the CTO, Red Hat

Red Hat
FlightPath Team

What we are hearing globally from our CTOs/CIOs

Too many experiments

- An oil and gas in the middle east: More than +7000 pilots and costs are rising
- The biggest bank in France: More than +1000 projects and not a clear path to production

Building new silos

- From top U.S. banks: new AI teams and Chief AI Officer roles are emerging outside CTO/CIO structures, creating new silos disconnected from the tech stack and enterprise strategy.

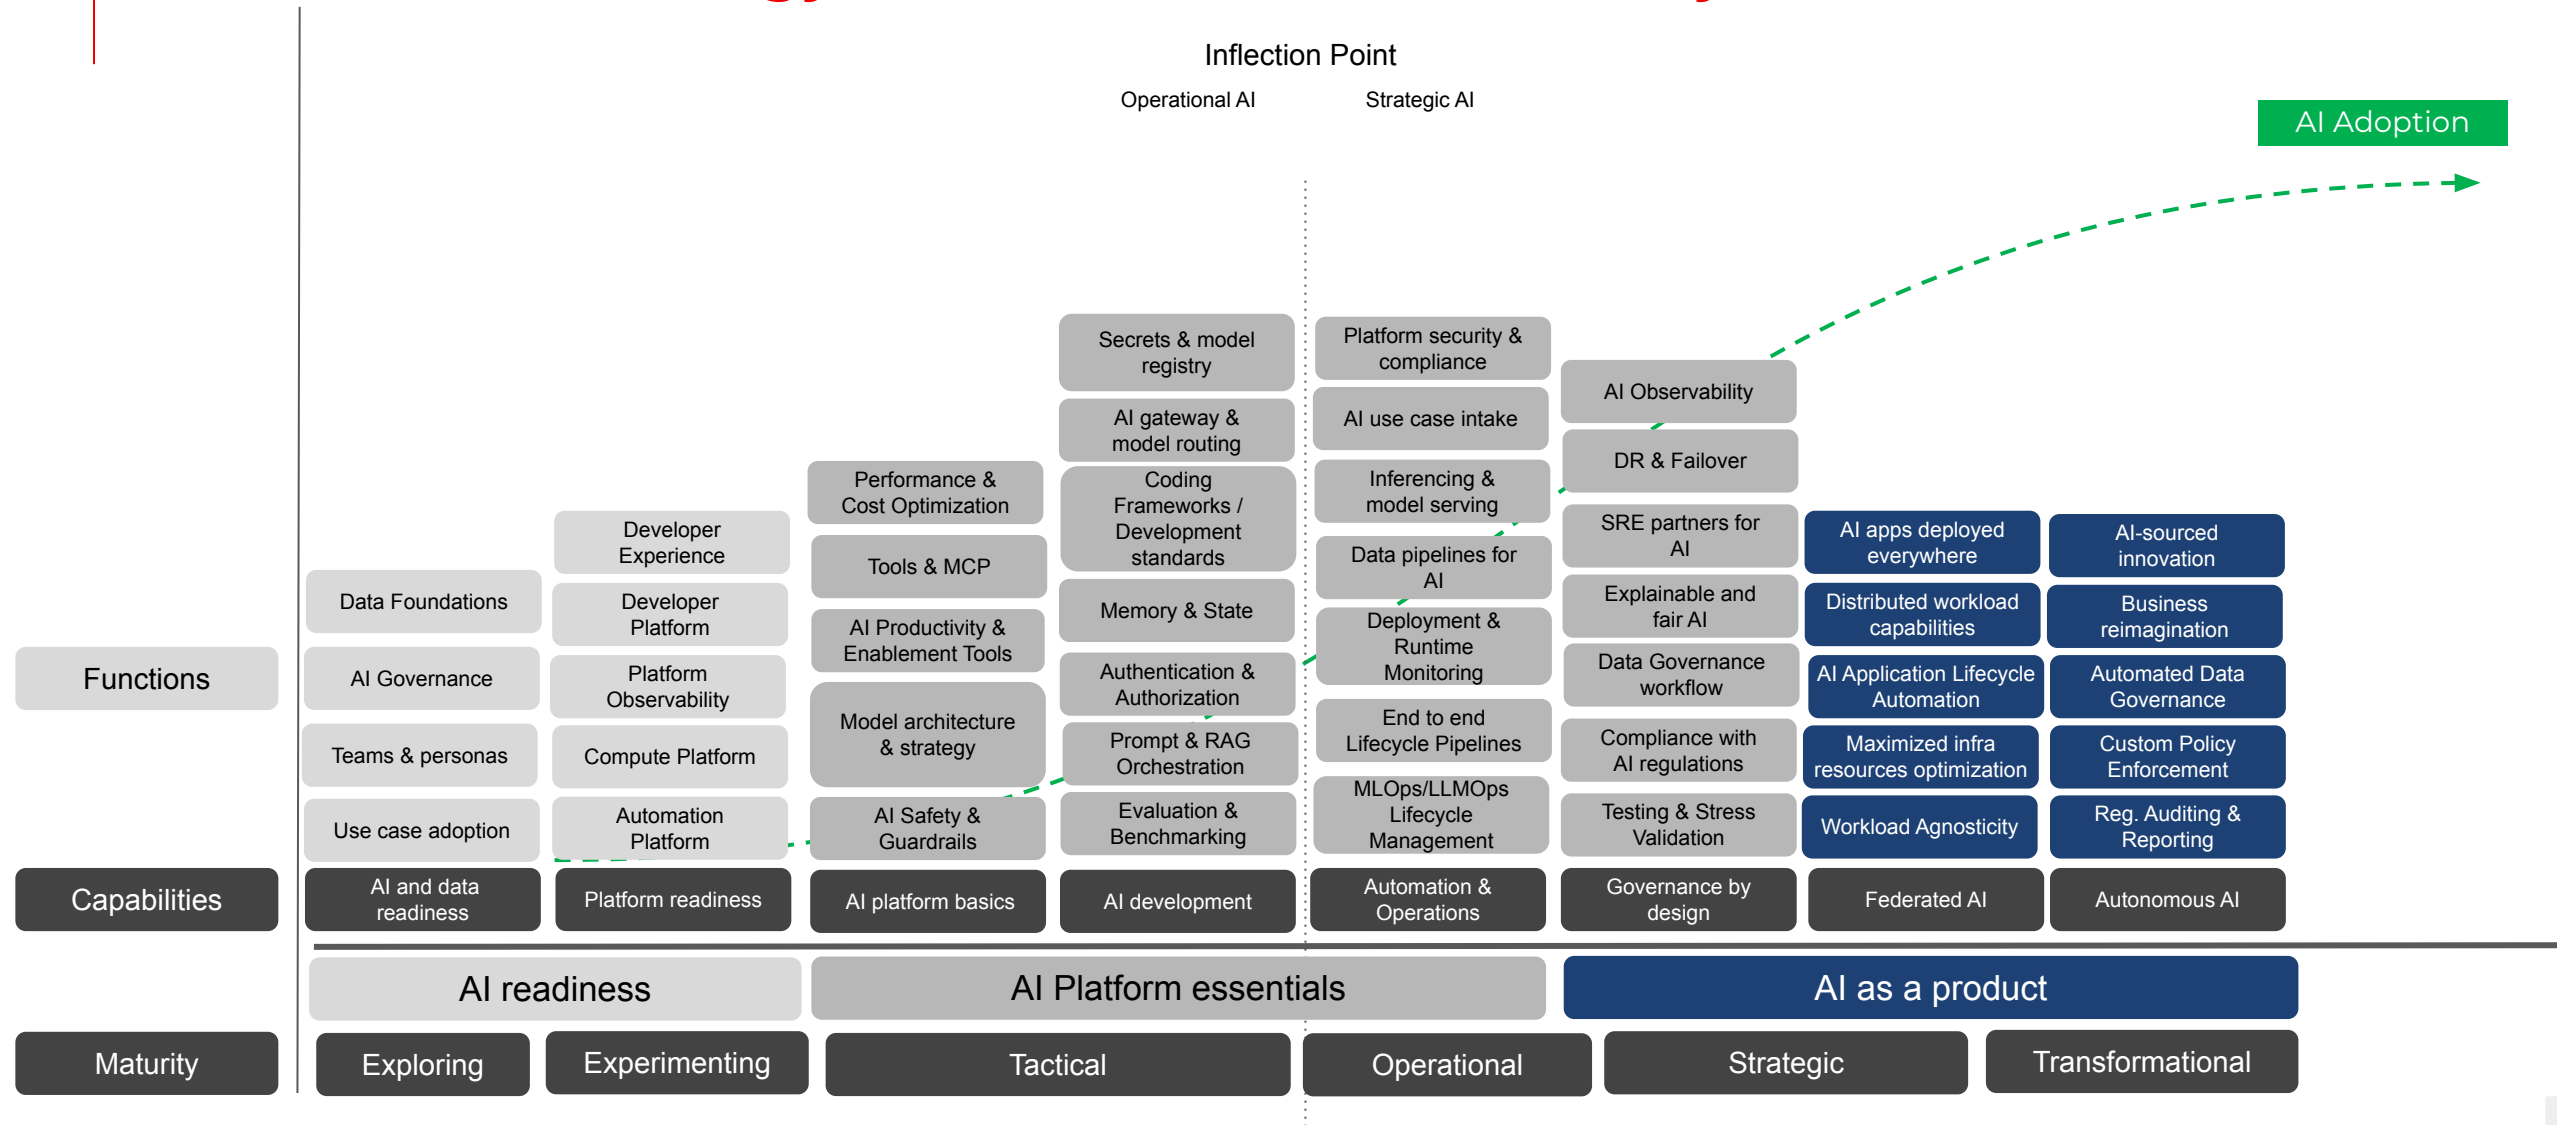

Sovereignty concerns

- The biggest bank in the world: sovereignty and control across global locations is now a priority, especially for AI, and it is slowing the path to production.

AI Platform Strategy - The end to end Journey

CONFIDENTIAL designator

Solution: Build your own journey

AI PLATFORM AS A PRODUCT

"A clear path to production"

A paved path from sandbox to production turns experiments into live services. Teams self-serve and ship in days, not thousands of pilots that never reach production.

BUILD FROM THE FOUNDATIONS

"One foundation, not new silos"

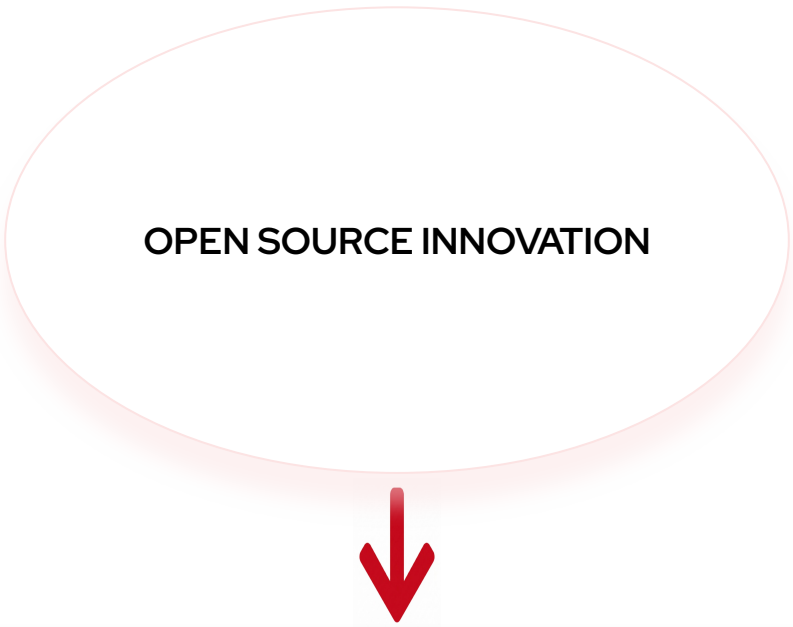

Every team builds on one shared base of data, compute, and governance instead of standing up parallel stacks. Each project compounds the last, so AI stays wired into enterprise strategy rather than fragmenting into silos.

END TO END JOURNEY – "Sovereign and scalable by design"

A repeatable, governable pattern runs across every region, cloud, and on-prem environment with control and compliance built in. Sovereignty stops blocking delivery, and the same pattern extends to new use cases without rebuilding or losing oversight.

Open source gives you the freedom to own the journey and innovate faster

OPEN SOURCE INNOVATION

END TO END JOURNEY – “Sovereign and scalable by design”

A repeatable, governable pattern runs across every region, cloud, and on-prem environment with control and compliance built in. Sovereignty stops blocking delivery, and the same pattern extends to new use cases without rebuilding or losing oversight.

Recommended State: Governance by design

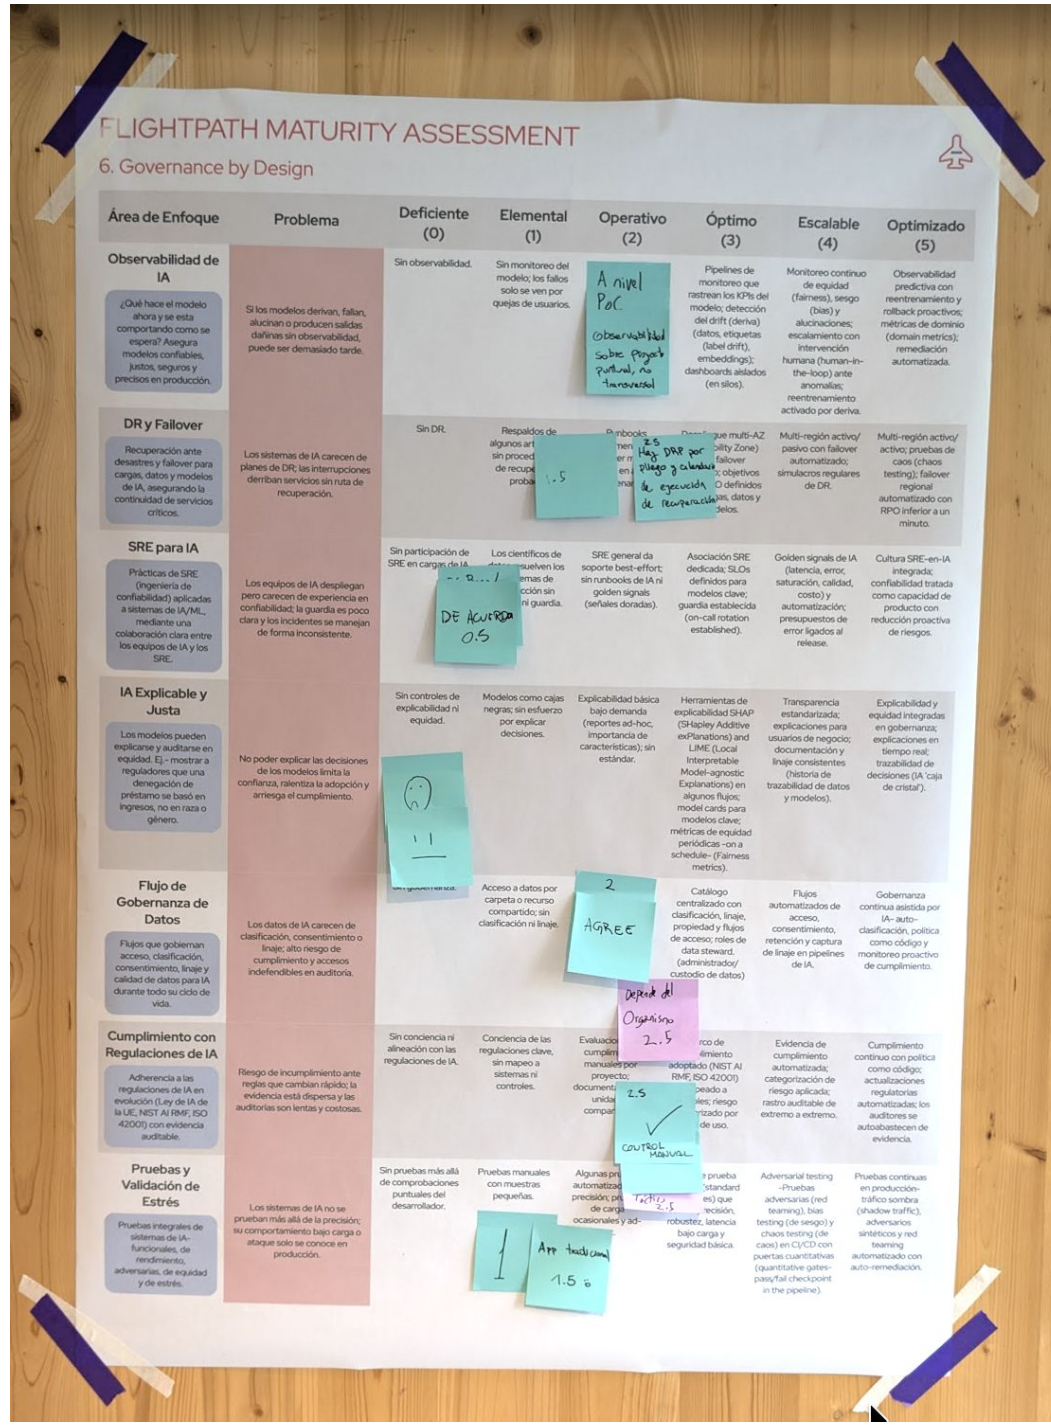

Governance by Design

Explainable & Fair AI:

From exploring (0) to Optimal (3)

- Immediate Step: Build basic explainability capabilities via reporting.
- Start working on transitioning to advanced tools like SHAP (Shapley Additive Explanations) and LIME (Local Interpretable model-agnostic explanations) for target workflows.
- Model Documentation: Implement Model Cards for all key models.
- Continuous Evaluation: Set up Fairness Metrics on a recurring schedule.

Recomendaciones - IA (3/3)

Actions

Measure By

Capability Matrix

AI Observability	2 → 3
DR & Failover	1 → 3
SRE for AI	0 → 1
Explainable and fair AI	0 → 3
Data Governance workflow	2 → 3
Compliance with AI regulations	2 → 3
Testing & Stress Validation	1 → 2

Governance by design

Governance by design:

- Observabilidad de IA
 - Hay que moverse de la evaluación manual inconsistente a tener pipelines de monitoreo que rastreen los KPIs del modelo; detección del drift (deriva) (datos, etiquetas (label drift), embeddings); dashboards aislados (en silos).
- DR y Failover
 - Comenzar a trabajar en primero tener runbooks documentados; y failover manual posible en casos críticos de producción
 - Para luego tener despliegue multi-AZ (Availability Zone) con failover probado; objetivos RTO/RPO definidos para cargas, datos y modelos.
- SRE para IA
 - No hay equipo de SRE pero trabajemos en tener un plan de DR, Failover e ingeniería de confiabilidad
- IA Explicable y Justa
 - Hay que priorizar esta parte de la gobernanza y comenzar a desarrollar primero explicabilidad básica mediante reportes, con el objetivo de desarrollar un estándar y utilizar herramientas que faciliten el proceso
 - Para eventualmente ir a herramientas de explicabilidad SHAP (SHapley Additive exPlanations) and LIME (Local Interpretable Model-agnostic Explanations) en algunos flujos; model cards para modelos clave; métricas de equidad periódicas -on a schedule- (Fairness metrics).
- Flujo de Gobernanza de Datos
 - Trabajar en la gobernanza de datos y construir un catálogo centralizado con clasificación, linaje, propiedad y flujos de acceso; roles de data steward. (administrador/custodio de datos)
- Cumplimiento con Regulaciones de IA
 - Moverse de evaluaciones manuales, a codificarlos, automatizar mapeado a controles; riesgo categorizado por caso de uso
- Pruebas y Validación de Estrés
 - Moverse a tener aunque sea algunas pruebas automatizadas de precisión; pruebas de carga ocasionales y ad-hoc.

- Focus on measuring value on one AI use case and use it as a test for the new value AI framework

Key takeaways for Sovereign AI Applied

- From our experience working
across global accounts -

WHAT: Own your AI platform by building the capabilities required across the end-to-end journey

HOW: Align people and process, consolidate tools and governance, and create the shared operating model needed to bridge silos.

WHY: Gain the control and speed needed to create a clear path to production, while preserving space for innovation.

Collaboration the open source way is what truly allows you to OWN your path

“For the first time in the bank, we brought together teams from technology, security, engineering, infrastructure, operations, AI, data, platform, and development – all in the same room, aligned around a common objective. We found a space where collaboration was real, conversations were honest, and we collectively began shaping a shared path forward.”

CTO - from one of the biggest banks in LATAM (Feb 2026)

Q&A

Thank you

Why

An enterprise strategy global team from the Field CTO Office of Red Hat

Our Why

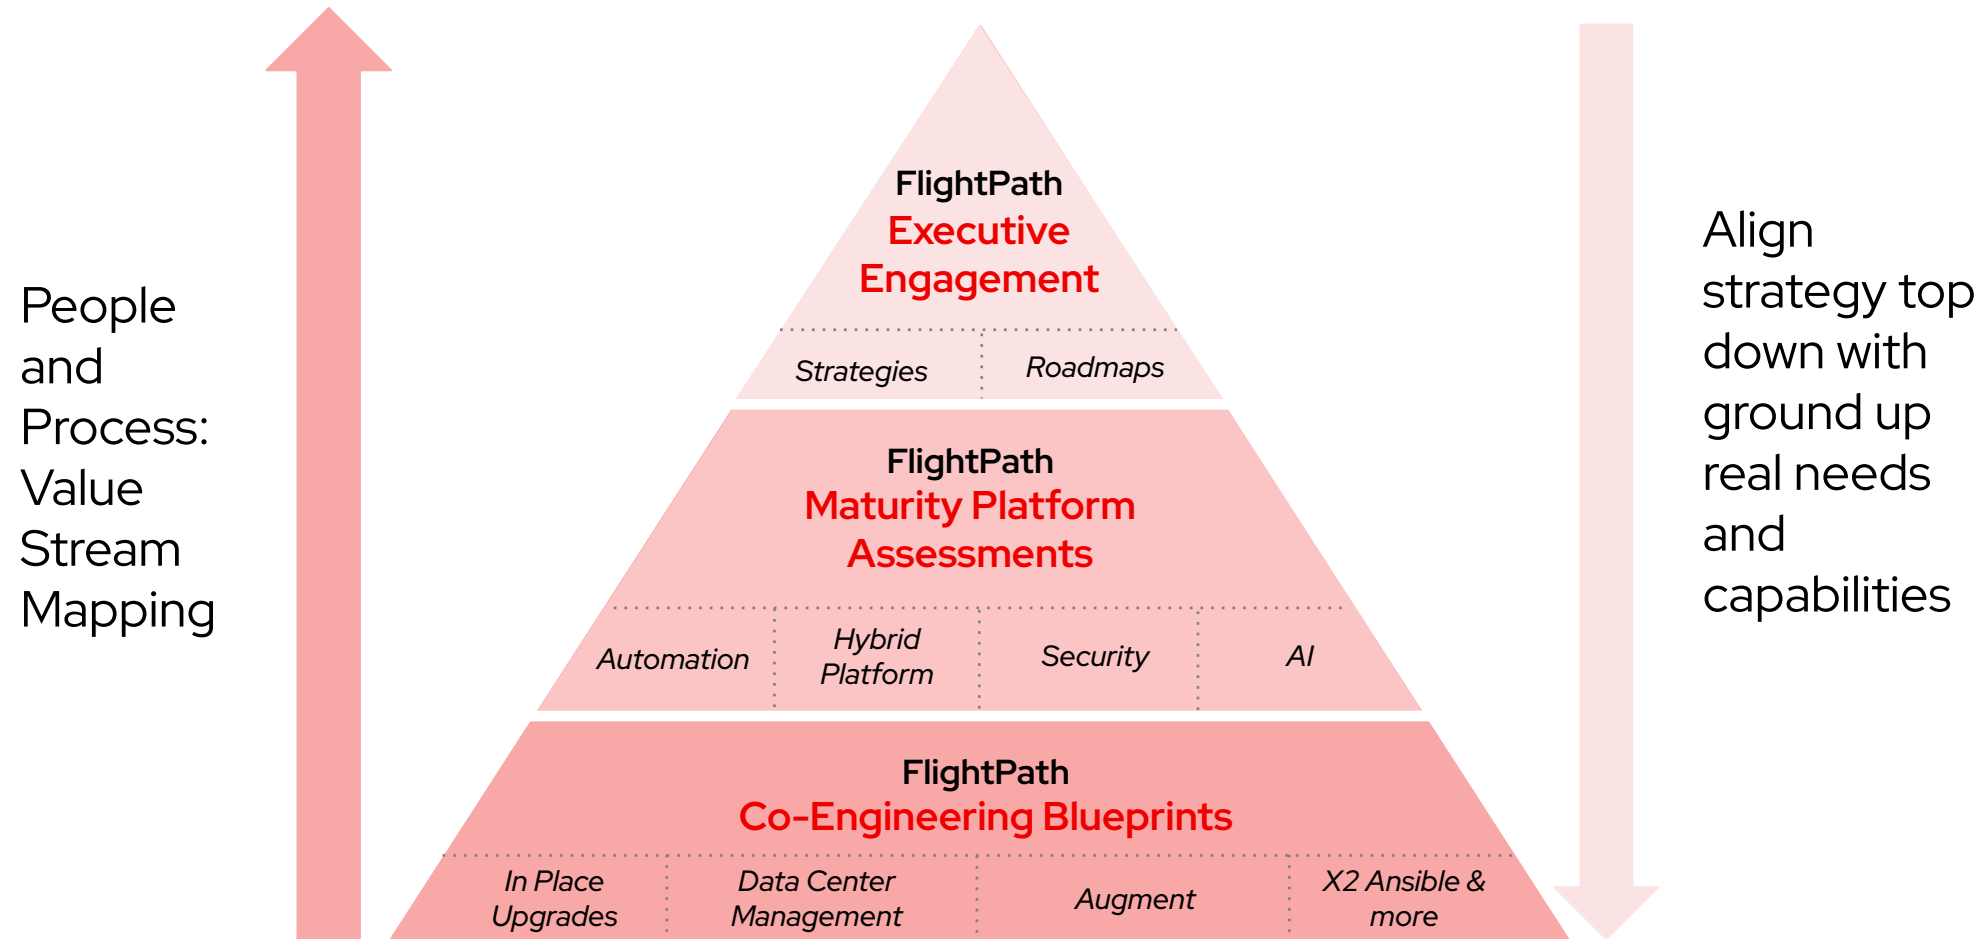

We abstract away from the product and focus on the **capabilities** you need to build a long-term technological journey, not the features you buy this quarter. That is how you cross the gap from pilot to production: by constructing AI the way you construct technology, owned end to end, no silos.

And it runs both ways. By working the hardest real-world problems alongside our customers, we learn what the market actually needs, so the journey we co-design is not theory. It is earned.

The FlightPath Components

From strategy to co-engineering

How do we close that gap?

For the production gap

Big picture

Everything is connected and AI is part of the tech stack. Treat it as such and focus on the holistic view and long term journey, how everything fits together, rather than one vendor, the next month innovation or only one piece of the puzzle

For the spotlight gap

Connection

Business and tech need to be more connected than ever, CEOs and their employees need to work together to make AI a reality because its a change of paradigm and in order to work we need to align strategy and ground work. All our jobs now depend on connecting the dots

For the opportunity gap

Own it

Owning your journey will solve the ROI problem because when you think about all the aspects and capabilities you are also driving it home. AI and data sovereignty is the single strongest predictor of enterprise AI success.

What is FlightPath?

FlightPath is an **enterprise strategy team** from the Office of the CTO, supporting customers with high potential for innovation.

Our Why

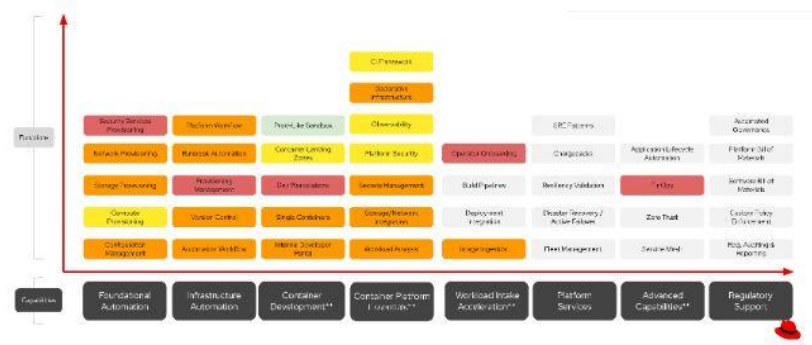

We abstract from the product and we focus on all the capabilities needed to build a long term technological journey, so we could also learn real life problems and the market

The AI FlightPath Strategy Framework

We treat AI as a foundational platform that connects business goals, ecosystem integration, and enterprise readiness, and we will start at the top, with business value.

WHY:

Focusing on the business challenge or advantage you're solving with AI is the foundation of a successful strategy. From here we tailor the engagement based on a structured AI journey maturity assessment, ultimately defining the path to value we will co-create together.

HOW:

This is where value is orchestrated. The intersection of people, tools, and process, where models meet applications, where OSS and partner technologies interoperate, and where governance and DevEx align to drive measurable outcomes.

WHAT:

The AI platform is the foundation to scale your AI strategy, that will make innovation repeatable, responsible, and enterprise-ready.
